SUMMARY

Product designer for AI products, websites and mobile apps that people use every day. Designed Ve end to end at Narrative Intelligence: an AI browser that prepares a product team's next step across email, calendar, Slack and docs, taken from first sketch to production-ready UI in Claude Code. At Beeyond Tech, designed the two dashboards that Top-10 Mobiles' store staff and head office now use daily to run online orders. Strong in AI interaction design, dashboards, mobile apps and design systems.

WORK EXPERIENCE

Product Designer - Narrative Intelligence (formerly Huemn Interactive Pvt. Ltd.), T-Hub, Hyderabad **Aug 2025 – Aug 2026**

AI startup building Ve, an AI browser and assistant that prepares the next step of a team's work.

- Owned the design of Ve end to end across two stages: a Mac Dynamic Notch with a desktop app, followed by an AI browser.
- Worked from research the founder and product manager ran with product-company founders, designing the move from a desktop app to an AI browser that sees email, calendar, Slack and docs for richer, more personal context.
- Designed Mission Control, the browser's central hub: every next step across tools, prepared by the AI for one-tap approval, plus a Browser Agent that runs several tasks end to end and waits for confirmation.
- Designed the AI's behaviours: Routines that spot repeated tasks and run only once the user turns them on, Tab Prediction that opens the Meet link before a call, meeting prep and recaps with owners, an inbox with replies drafted in the user's own voice, and a built-in coding space that already knows the context.
- Designed the Mac Notch: tap Fn to have a reply typed into the field you are in, hold Fn to dictate or hand over several tasks, plus meeting alerts with a Join button, live notes and a summary.
- Shared flows with engineers early so designs matched what the AI could do. Designed in Figma and built production-ready interfaces in Claude Code, with working functionality, animation and micro-interactions.

UI/UX Designer (Internship) - Beeyond Tech, Mumbai (Remote) **Apr 2025 – Jun 2025**

Main client: Top-10 Mobiles, a phone retail chain taking its stores online.

- Designed Store Admin and Super Admin, the two web dashboards that store teams and head office use for online orders, with the team in about a month. Both are live and used daily.
- Designed the order flow around proof at every hand-over: a 2.5-minute accept timer, IMEI capture before packing, one-time codes at pickup and delivery, and an unboxing video at the door.
- Built a small design system shared by both dashboards: one colour and one next-step button per order status, one type family, one icon set and shared components.
- Designed most screens of the customer app (search, delivery or store pickup, live tracking) and the delivery-partner app (document checks, swipe-to-confirm steps, delay and failed-delivery flows).
- Designed the responsive web store for phone, tablet and desktop, and built a pharmacy client's website in Framer.

SKILLS & TOOLS

Skills: Product Design · Interaction Design · AI & Agentic UX · Human-AI Interaction · User Flows & Wireframing · Prototyping · Design Systems · Dashboard & B2B Design · Mobile App Design · Responsive Web Design · Usability Testing

Tools: Figma · FigJam · Framer · Claude Code · Lovable

EDUCATION & CERTIFICATION

Bachelor of Visual Arts (B.V.A.), 3D Animation – ICAT Design & Media College **2018 – 2022**

UI/UX Design Certification – Internshala Trainings **Feb 2025**

2022 – 2025: Self-directed move from 3D animation into UX and product design.
