TASK 1 · UX AUDIT · DK HARDWARE PRODUCT PAGE

What stops a shopper from buying this charger

Milwaukee M12/M18 Multi-Voltage DC Vehicle Battery Charger

Model 48-59-1810 · $227.58 · dkhardware.com

The shopper: a contractor with Milwaukee tools who wants to charge batteries from the truck. I went through the live page on mobile (iPhone 17, 402pt) and desktop (1440px) with four questions in mind:

- **Is this the charger I'm looking for?**
- **Will it fit my batteries and my truck?**
- **What will it cost me, and when does it arrive?**
- **Can I trust this page?**

7
layers of header, bars and buttons before the product

750pt
down before the photo, which sits under a sticky bar

14
other actions compete with Add to cart

5
spec contradictions in a 33-row table

PROBLEMS RANKED BY IMPACT ON THE SHOPPER

01	**Header and sticky bars crowd the screen** Search bar, ticker, tabs, call bubble and B2B bar before the product	HIGH
02	**The product image isn't the first thing you see** Text and price come first; the photo starts 750pt down, half covered	HIGH
03	**"Will it fit?" has no clear answer** Compatibility is scattered and the specs contradict each other	HIGH
04	**Add to cart competes with 14 other actions** B2B tools outshout the buy button and push it out of reach	HIGH
05	**Price and delivery raise questions** Vague "save up to", no shipping cost, no delivery date	MEDIUM
06	**Reviews are about the store, not the charger** 5 stars up top, store complaints below	MEDIUM
07	**Wrong category and mixed brand signals** "Boat Tools", "CR Laurence", "Click To Copy" inside the title	MEDIUM
08	**Noise and inconsistency** Duplicate Q&A, internal data, four icon styles, five button styles	LOW

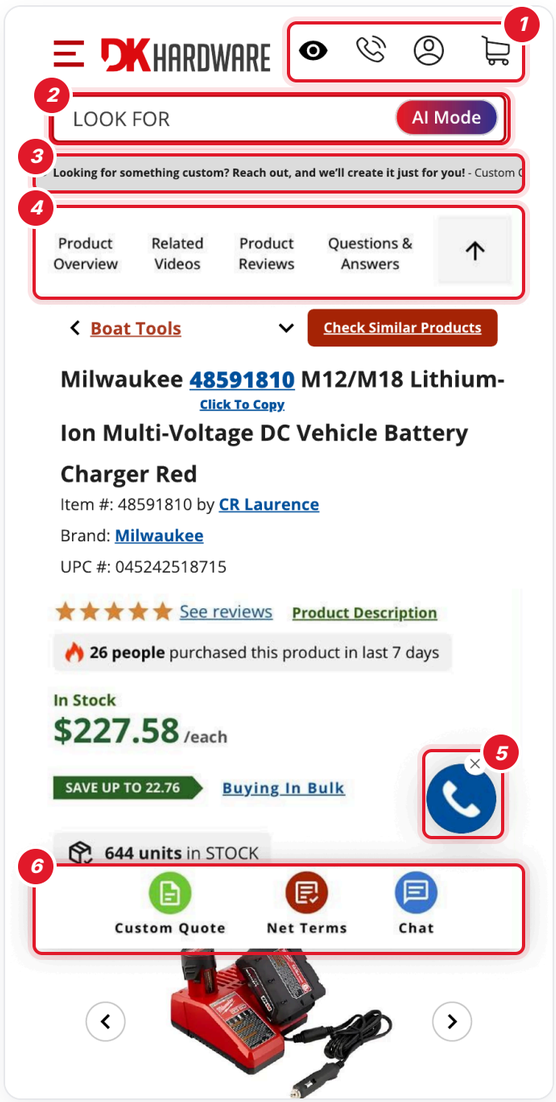

Impact = how badly it blocks the purchase × how many shoppers hit it. Screenshots: live page, October 2026. Problems in red; each fix is tagged in green on the redesign.

01

HIGH IMPACT · Mobile + Desktop

The header and sticky bars crowd the screen

BEFORE · FIRST MOBILE SCREEN

WHAT'S WRONG

1. Four header icons from different families, including an eye and a phone with no labels
2. A full-width search bar with "AI Mode" on a page the shopper has already found
3. A scrolling promo ticker about custom orders
4. A sticky tab bar for four sections far below the fold
5. A floating call button over the price
6. A sticky Custom Quote / Net Terms / Chat bar across the bottom of every screen

About **45% of the first screen** is store navigation and pinned bars. The rest is taken by text.

WHY IT MATTERS

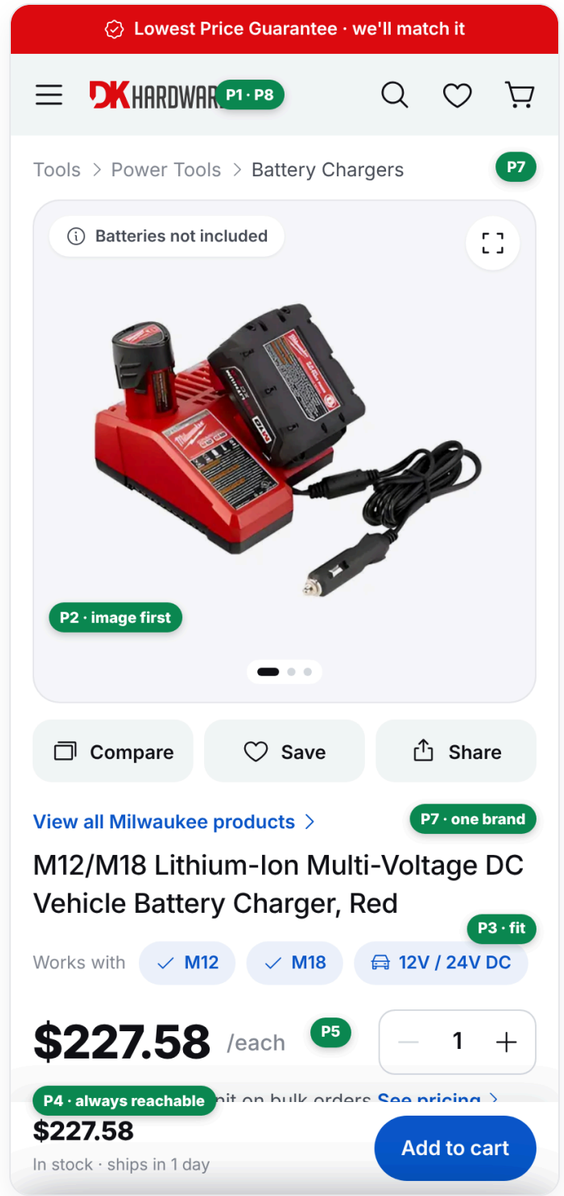

Pinned bars shrink the space for the product on every scroll, and unlabeled icons make shoppers guess. The page feels like a B2B portal, not a store.

HOW I'D FIX IT

One **slim header** (menu, logo, search, wishlist, cart) in one icon family. The promo shrinks to one short line. The tab bar, call bubble and B2B bar go. The only thing pinned is the Add to cart bar.

DESKTOP 6 utility links, 6 header items, an 8-item menu and 3 promo banners sit above the title. The fix keeps one nav row with the B2B links grouped at its right end.

AFTER · FIRST MOBILE SCREEN

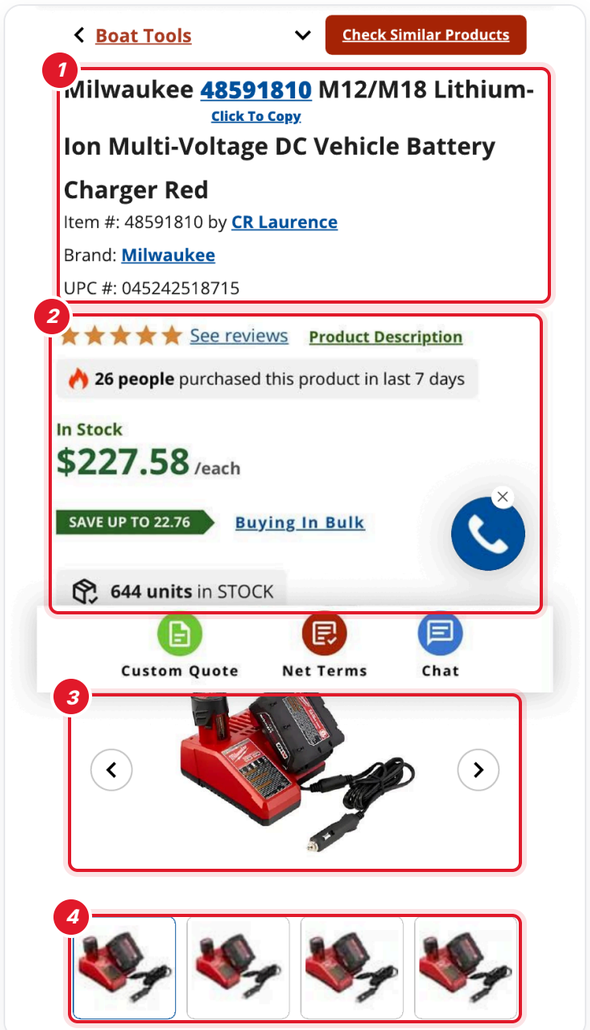

02

HIGH IMPACT · Mobile

The product image isn't the first thing a shopper sees

● BEFORE · WHAT LOADS ABOVE THE PHOTO

WHAT'S WRONG

1. The page opens on text: a 3-line title split by the SKU and "Click To Copy", then Item #, Brand and UPC
2. Then stars, "26 people purchased", price, "Save up to" and stock
3. Only then the photo, about **750pt down**, with the sticky B2B bar cutting across it
4. The "gallery" is four thumbnails of the same picture

Shoppers have to read a block of codes before they can see what they're buying.

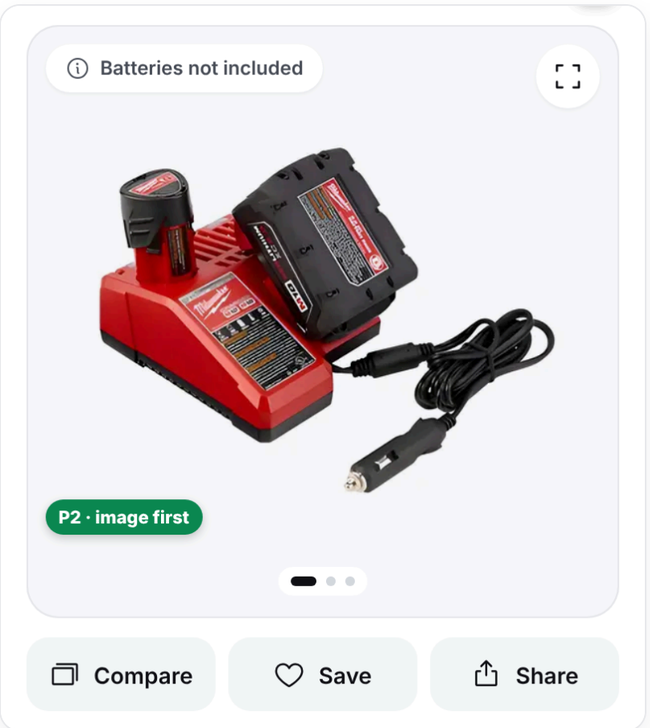

WHY IT MATTERS

The photo is the first thing shoppers look for. It confirms "is this the charger I want?" before they read a word. Here they can't confirm the product, the cable or the plug without scrolling, and the duplicate thumbnails make the page look unfinished.

HOW I'D FIX IT

Image card right under the header, filling the first screen: the full product, then close-ups of the vehicle plug and the charge panel, with swipe, dots and full-screen view. A **"Batteries not included"** pill sits on the photo. Compare, Save and Share sit just below, then the title and price.

● AFTER · FIRST THING ON THE PAGE

03

HIGH IMPACT · Mobile + Desktop

"Will it fit my batteries?" has no clear answer

BEFORE · ROWS FROM THE SPEC TABLE

① 12/24V in, 18V out… or "12/18"?

Input Voltage	12/24 V
Output Voltage	18 V
1 Voltage	12/18

② 30–60 minutes or 3 hours?

2 Charging Time	30 to 60 Min.
Time to Charge (Hours)	3

③ For M18… but series M12?

3 For Use With	M18
Series	M12

④ Batteries in the photo: are they included?

4

WHAT'S WRONG

For a charger, the one question that matters is "does it fit my battery and my truck?". The answer is spread over a **33-row table that contradicts itself five times**:

1. Input 12/24V and output 18V, then "Voltage 12/18"
2. Charging time "30 to 60 min", then "Time to charge: 3 hours"
3. "For use with M18" and "Series M12", while the title says M12/M18 and the first feature names one 18V pack
4. The only photo shows two batteries. Nothing says whether they're in the box

Cord length is also listed as 6.3 ft and 6 ft, and dimensions appear twice with different numbers.

WHY IT MATTERS

A shopper who isn't sure it fits won't buy, or buys and returns it. Each contradiction makes every other claim on the page harder to believe.

HOW I'D FIX IT

"Works with" chips under the title (M12, M18, 12V/24V DC) and a plain **"Charger only, batteries sold separately"** note above the buttons. Below them, one clean set of highlights and specs, with conflicts resolved with the supplier.

P7 · one brand

M12/M18 Lithium-Ion Multi-Voltage DC Vehicle Battery Charger, Red

P3 · fit

Works with ✓ M12 ✓ M18 12V / 24V DC

ⓘ **Charger only**, batteries sold separately. For vehicles: plugs into a 12V/24V DC outlet, not a wall socket.

Product highlights P3 · P8 · one clean spec set

12/24V DC Input	**M12 & M18** Batteries	**30–60 min** Charge time
6.3 ft Cord	**1 battery** At a time	**5 years** Warranty

Keep your M12 and M18 batteries topped up between jobs. Plug into your truck's 12V or 24V DC outlet; protective electronics shut the charger down before it can drain the vehicle battery.

HIGH IMPACT · Mobile + Desktop

Add to cart competes with 14 other actions

BEFORE · THE BUY BOX ON MOBILE

WHAT'S WRONG

1. The only buy button, about **1,140pt down** the page
2. Affirm and PayPal squeezed next to it, one cut off mid-word
3. "+ Add to Wishlist" as an underlined text link
4. "Buy in Bulk & Save - See How" and "Watch Now"
5. Get Volume Pricing in a red outline, louder than Add to cart
6. Get Custom Quote
7. B2B Net Terms, Safe Payment, Ask Question
8. A cancer warning right under the buy box

Add the sticky bar and call bubble: **14 other tappable things**. Once you scroll past the button, there's no way back to it.

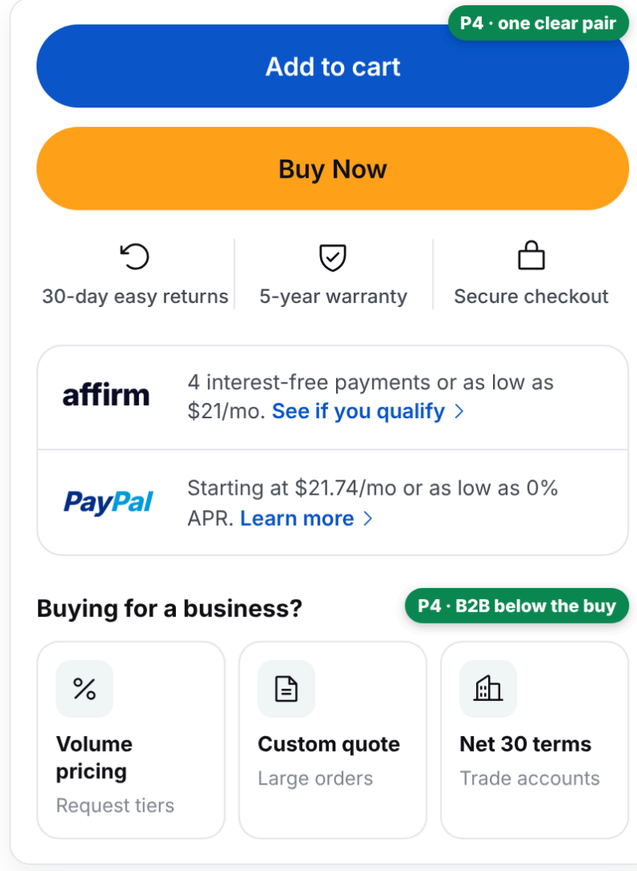

WHY IT MATTERS

Every extra option slows the decision (Hick's law). Everyday buyers wonder whether they need an account or a quote to buy one charger.

HOW I'D FIX IT

One clear pair of actions: a blue Add to cart and an orange Buy Now. A sticky bar keeps Add to cart reachable on every scroll. Pay-later sits in one tidy card, and business options move below the buttons as three quiet cards.

AFTER · THE BUY AREA

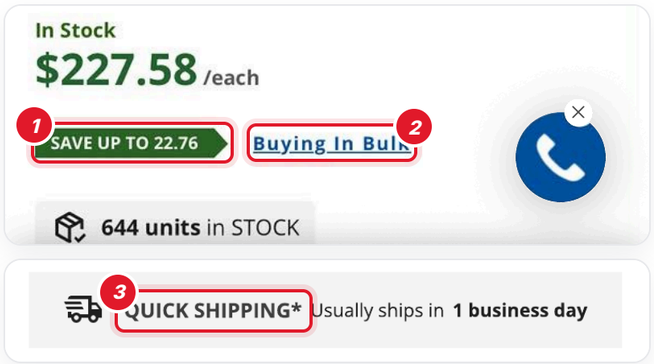

05

MEDIUM IMPACT · Mobile + Desktop

Price and delivery raise questions instead of answering them

BEFORE · PRICE AND SHIPPING

WHAT'S WRONG

1. "SAVE UP TO 22.76": no $, no original price, no condition. It reads like a discount on this unit
2. ...but it's actually a bulk saving, hidden behind "Buying In Bulk"
3. "QUICK SHIPPING*": the asterisk leads nowhere

Nowhere on the page is there a **shipping cost, a delivery date or a ZIP check**, and the price sits in green next to a green "save" badge.

WHY IT MATTERS

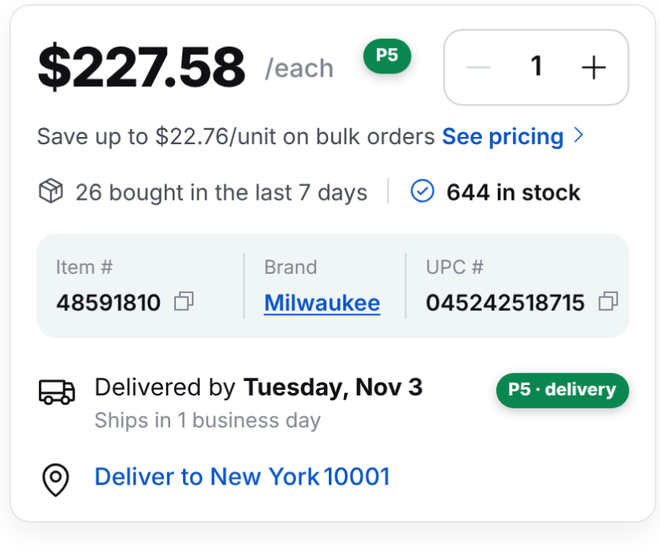

Unexpected costs are the top reason shoppers abandon a purchase in Baymard Institute's checkout research. For a $227 charger, "what will it cost me, and when do I get it" decides whether it goes in the cart.

HOW I'D FIX IT

A **plain dark price** with the quantity stepper beside it. One honest line: "Save up to $22.76/unit on bulk orders · See pricing". Real demand and stock, Item #, Brand and UPC with copy icons, and **"Delivered by Tuesday, Nov 3"** with a ZIP the shopper can change.

DESKTOP The same block sits in the right column, with delivery and ZIP side by side above the buttons.

AFTER · PRICE, STOCK AND DELIVERY

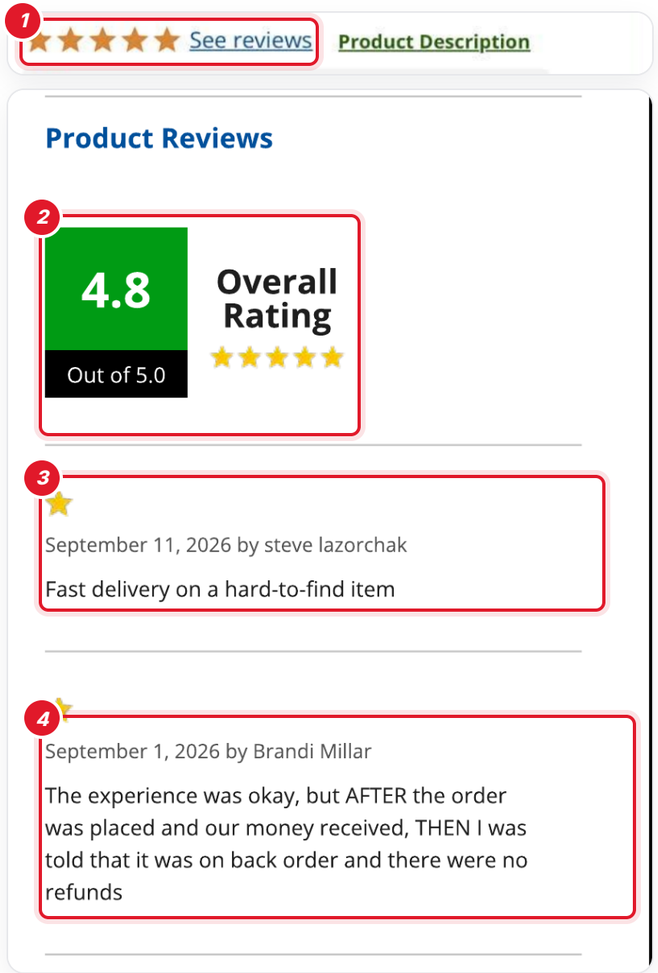

06

MEDIUM IMPACT · Mobile + Desktop

The reviews are about the store, not this charger

BEFORE · TOP OF PAGE, THEN THE REVIEWS

WHAT'S WRONG

1. Five stars and "See reviews" right under the title
2. "4.8 Overall Rating" with no review count
3. Each review shows a single star and talks about delivery
4. Others cover back orders, refunds, order tracking, a shower repair and an RV cabinet hinge

These are **Shopper Approved reviews of the store**. Not one is about this charger. "Related Videos" is a generic DK Hardware brand video, too.

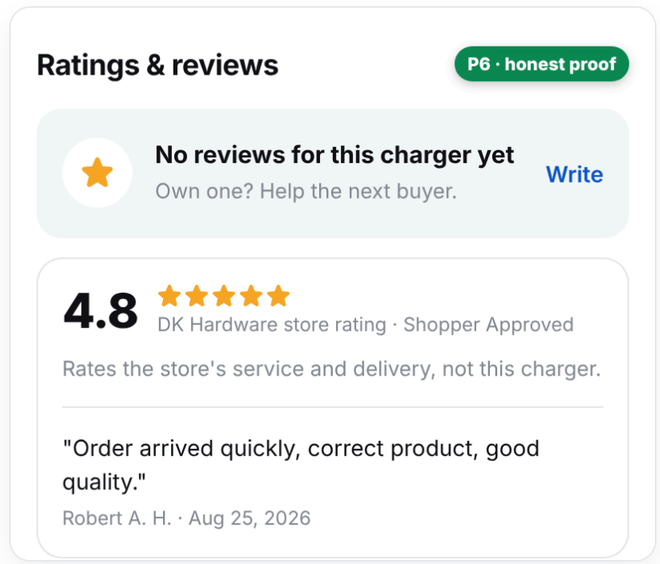

WHY IT MATTERS

Reviews are how shoppers check fit and quality. Stars that turn out to describe something else feel like a trick, and a shopper who spots it starts doubting the rest of the page.

HOW I'D FIX IT

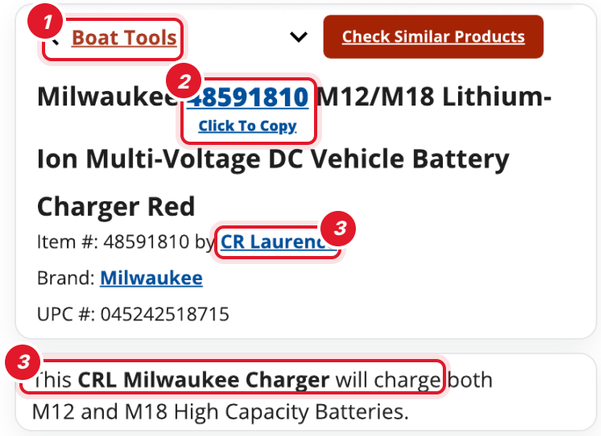

Split proof by what it's about. For the product, **"No reviews for this charger yet · Write"**. For the store, a labelled **"DK Hardware store rating 4.8 · rates the store's service, not this charger"**. Real signals move up: 9 answered questions, 30-day returns, 5-year warranty.

AFTER · HONEST PROOF

Signals that make the page harder to trust

BEFORE

07 Wrong category and mixed brand signals

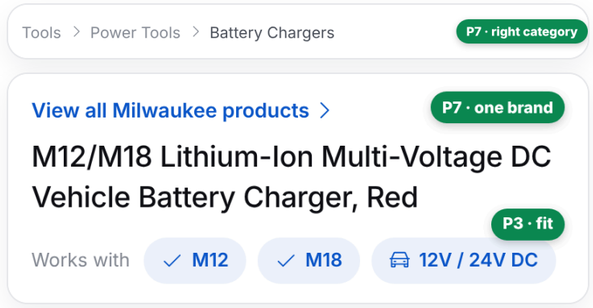

MEDIUM

1. The breadcrumb files a power-tool charger under **Marine & Boats › Boat Tools**
2. The title starts with the SKU as a link, split by "Click To Copy"
3. "by CR Laurence" and "CRL Milwaukee Charger" name a second company. The URL promises "RedLink", which the page never mentions

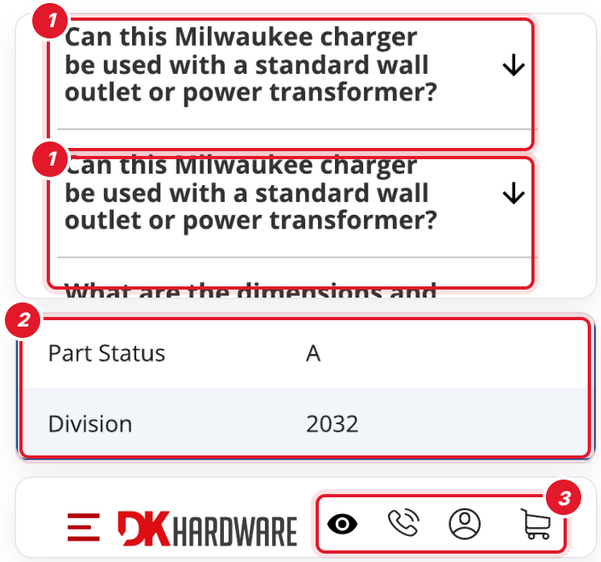

HOW I'D FIX IT

Breadcrumb **Tools › Power Tools › Battery Chargers**. "View all Milwaukee products" above a clean title with no SKU. Item #, Brand and UPC move into the info box.

AFTER

BEFORE

08 Noise and inconsistency

LOW

1. "18 Questions" are really 9: every question appears twice, all collapsed
2. Internal fields (Part Status "A", Division "2032", Vendor Drop Ship "N") and words broken mid-cell
3. Four icon styles in the header. Red outline, blue outline, filled and boxed buttons below

HOW I'D FIX IT

Each question once, with its answer visible. Grouped specs with internal fields removed. One icon family (Phosphor) and one button system: blue for cart, orange for buying, grey for the rest.

AFTER
