TASK 2 · REDESIGN · MOBILE, FULL PAGE

A product page that answers the shopper's four questions in order

1 Image first, store second
Full-bleed photo right under a three-icon header. Promo ticker, tab bar, call bubble and B2B bar leave the first screen.
Fixes P1 · P8

2 Answer "will it fit?" next
"Works with" chips and a "charger only" note come straight after the price. One clean spec set replaces 33 conflicting rows.
Fixes P2 · P7

3 One pair of actions, always in reach
A sticky bar with Add to cart and Buy now that turns into "Go to cart". Every B2B tool lives behind one row.
Fixes P3

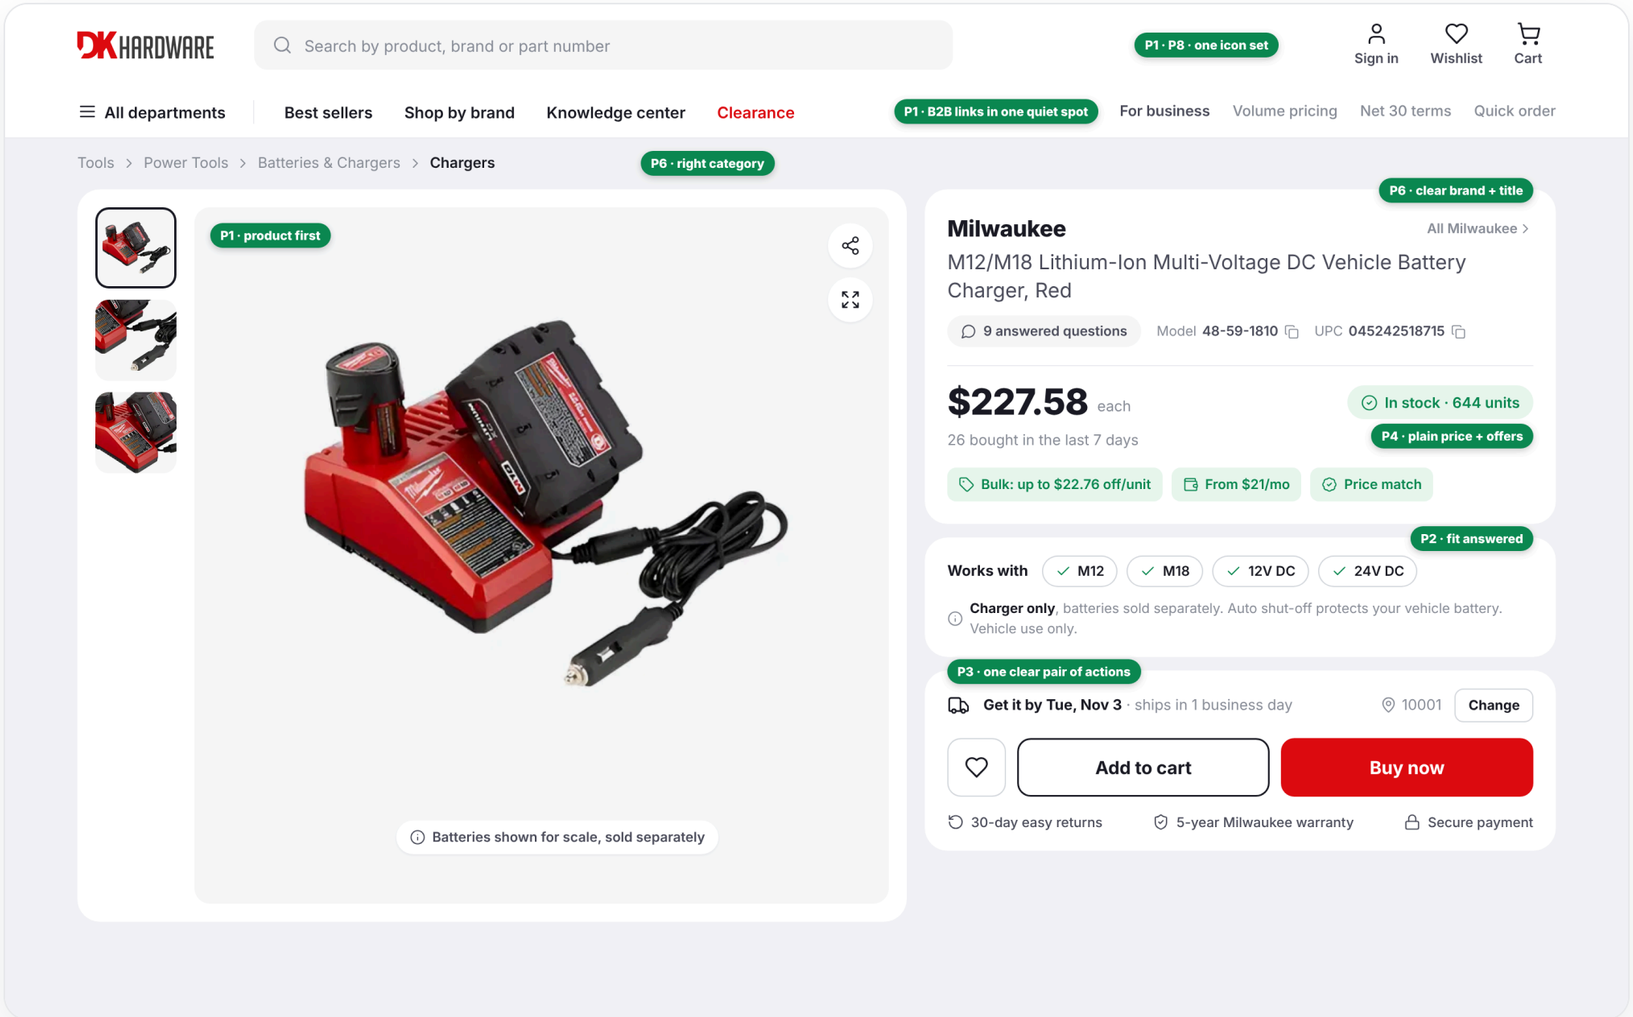

4 Cost and arrival up front
Plain price, one "Offers for you" list, and a ZIP-based "Get it by Tue, Nov 3" with returns and warranty beside it.
Fixes P4

5 Only honest proof
Real data only: product reviews and store rating labelled apart, 9 answered questions surfaced, Milwaukee as the one brand.
Fixes P5 · P6

6 Modern commerce language, one accent
White cards on grey bands, as on Myntra and Flipkart. Inter, Lucide icons, and DK red only on the strongest action.
Fixes P8

TASK 2 · REDESIGN · DESKTOP, ABOVE THE FOLD (1440 × 900)

Same system on desktop: product, fit and actions in one view

TASK 1 PROBLEM → WHAT CHANGED

P1 Product buried
One nav row; photo and buy box share the first view

P2 Fit unclear
"Works with" chips + "charger only" note under the price

P3 Competing actions
Wishlist, Add to cart, Buy now; B2B links grouped in the nav

P4 Cost and delivery
Plain price, three offer chips, delivery date above the buttons

P5 Misleading reviews
"9 answered questions" instead of borrowed stars

P6 Category and brand
Correct breadcrumb, Milwaukee first, no SKU in the title

P7 Noise
Internal fields and duplicates removed from specs and Q&A

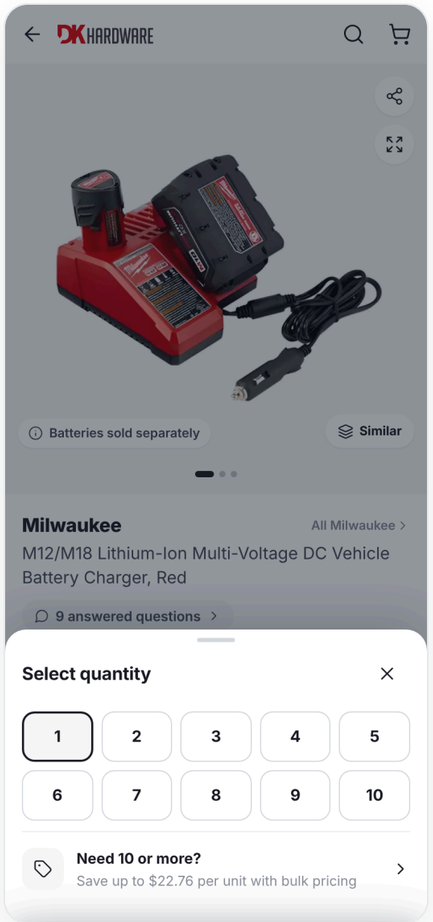

P8 Inconsistency
One icon set, three button styles, one accent

Real content only: product photo, title, price, specs and offers from the live page

TASK 2 · BONUS · ADD-TO-CART PROTOTYPE

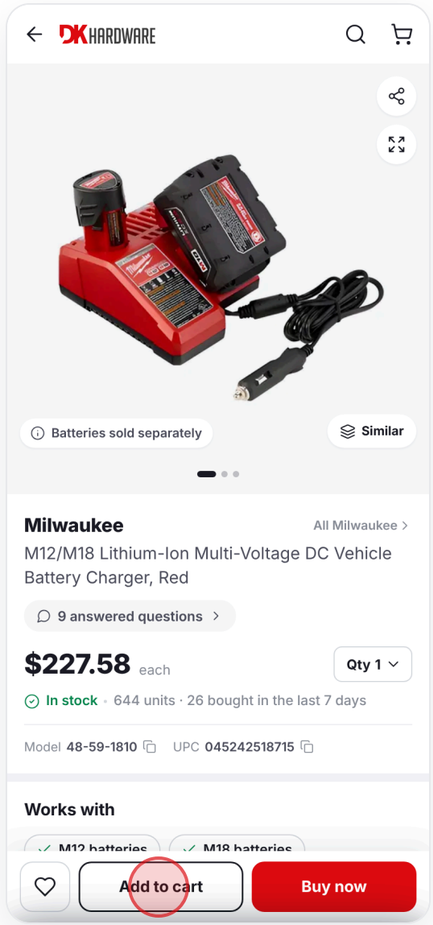

From product to checkout in three taps

1

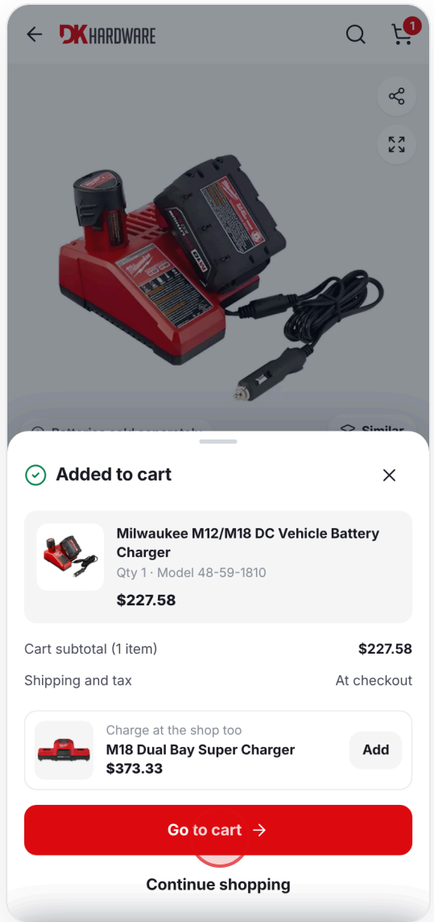

Pick a quantity
Qty chip opens a sheet; 10+ links to bulk pricing.

2

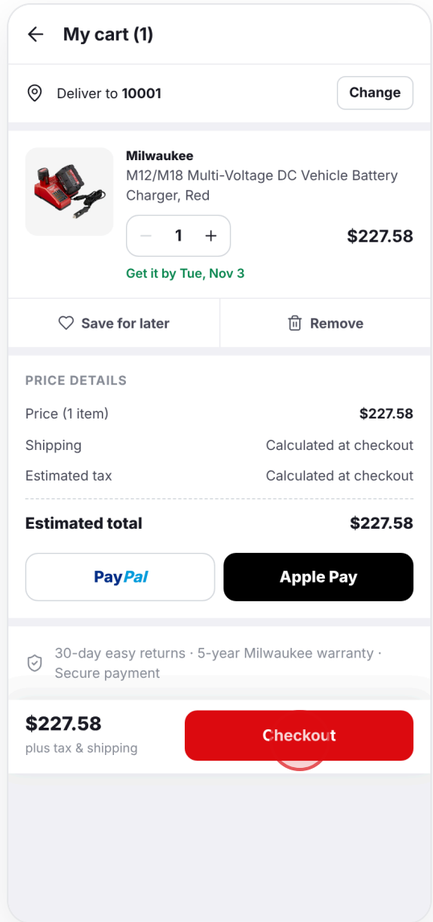

Tap Add to cart
Always in the bottom bar, wherever the shopper is.

3

Confirm, then go to cart
Sheet shows item, subtotal and one relevant add-on; badge and bar update.

4

Review and check out
Quantity, save for later, price details, PayPal / Apple Pay, sticky total.

5

Secure checkout
End of the prototype. Buy now skips step 3 and lands straight in the cart.

Try it: open **redesign/mobile.html** in a browser. Every button in this flow works, plus ZIP change, wishlist, copy model number, image viewer and the business sheet.
