Portfolio: yashu147.github.io/Portfolio

SUMMARY

Product designer who turns AI capabilities into simple, usable interfaces. Owns design end to end, from first ideas to shipped products. Designs in Figma and builds production-ready interfaces with Claude Code. Designed features including a proactive meeting-intelligence notch, Mission Control, Routines, Tab Prediction, and the Browser Agent. Skilled in AI Product Design, Agentic UX, Human-AI Interaction, AI Workflow Design, Interaction Design, Design Systems, and Design-to-Code.

WORK EXPERIENCE

Product Designer (UI/UX)

Narrative Intelligence, T-Hub, HITEC City, Hyderabad

August 2025 - August 2026

Narrative Intelligence (formerly Huemn Interactive Pvt. Ltd.) is an AI startup building an AI browser and assistant.

- Designed the Dynamic Notch for the Mac for Proactive Meeting Intelligence: detects upcoming meetings, alerts users to pending replies and actions, joins and listens to meetings, and lets users chat about them later.
- Created an Fn-key interaction model: tap Fn for Prediction to read the screen and write a reply in the active text field; hold Fn and speak to activate the notch for Voice Intent, which handles dictation or tasks.
- Designed the desktop app: chat about anything, past and upcoming meetings, saved dictations and Prediction outputs, platform connectors, and email labels to organise your inbox.
- Led the product's shift from desktop app to AI browser on the insight that most user work already happens in the browser, giving the AI far richer context about the user so its output becomes personal.
- Designed Mission Control, the AI browser's central hub: connects the user's email and Slack, pre-drafts replies for one-tap approval, and shows every AI task - running, done, and coming up.
- Designed Routines, where the AI notices tasks the user repeats daily and suggests automating them, with the option to create routines manually.
- Designed Tab Prediction, where the AI understands what the user needs next and opens the right tab fully prepared, such as finding the Google Meet link in Gmail before a client call.
- Designed the Browser Agent, which takes on 5-6 tasks at once and runs them end to end, always waiting for the user's confirmation so the final say stays with the user.
- Designed the AI browser's dedicated email inbox: connect a Google account and all mail arrives in one organized inbox, with replies already drafted.
- Designed in Figma and built production-ready interfaces directly with Claude Code, tightening design-to-development handoff.

UI/UX Designer (Internship)

Beeyond Tech, Mumbai (Remote)

April 2025 - June 2025

- Worked across three projects: two websites and one full e-commerce platform, each designed responsively for laptop, tablet, and mobile.
- For the e-commerce platform, designed the super admin dashboard, admin dashboard, and the mobile app plus website.
- Designed and prototyped customer and delivery-partner workflows, iterating based on stakeholder feedback and usability insights.
- Designed and developed responsive websites in Framer, optimizing layouts, breakpoints, and interactions across desktop, tablet, mobile, and high-resolution displays.

EDUCATION

Bachelor of Visual Arts (B.V.A.), 3D Animation - ICAT Design and Media College | 2018 - 2022

2022 - 2025: Independent UX design practice - self-directed transition from 3D animation into product design.

SKILLS

AI Product Design | Agentic UX | Human-AI Interaction | AI Workflow Design | Interaction Design | Design Systems | AI Prototyping | Design-to-Code | Front-End UI Development | Interactive UI & Motion Design
